

RAP 314 Customer Support

From Rovipedia, the Rovisys encyclopedia

Approved

Purpose: This procedure provides the methods and tools for assigning and tracking support requests from customers who operate systems engineered by RoviSys. This RAP defines escalation for requests after startup. Support could be under warranty, outside of either the warranty period or project scope. The primary goal when receiving a support request is to ensure that the customer needs are addressed in a timely manner to minimize any impact on the customer's operations. The warranty period is defined in the terms and conditions associated with the project.

Non-emergency support requests should be reviewed by the project manager to determine if they are within the scope of the support contract or new project work.

The guidelines within this RAP are to be followed, when appropriate, to achieve the primary goal stated above.

Definitions:

- **Director (Dir):** A RoviSys management employee reporting to the President.
 - **Group Manager (GM):** A RoviSys management employee reporting to a Director.
 - **Project Manager (PM):** A RoviSys employee trained and experienced in control system project management. This is typically a Group Manager or Senior Engineer.
 - **GrandView (GV):** A Project Management collaboration system used by RoviSys to track project status and progress, share information, and manage progress.
 - **Support Contract:** A Purchase Order (PO) from a client covering unplanned engineering activities on specific systems as specified in the RoviSys Maintenance and Support proposal.
 - **Lead Engineer (LE):** An experienced RoviSys engineer that works closely with the PM and the project team to ensure the project is executed properly.
 - **Project Engineer (PE):** A RoviSys Engineer working as the primary technical interface with the customer.
-

1. GrandView will be used for tracking of support calls and followup activity.

1. While a systems project is still open, all support calls for that system will be entered in the GrandView job for that project and assigned to a team member. The PM and Lead Engineer (LE) will monitor progress via status logs. This activity will be pertinent to the project close and final invoicing in most cases.
2. If a system project is closed but a Support Contract exists, then the GrandView Job set up for support will be used to enter and track issues. The current configuration files are also to be stored in this job. The Project team shall include the primary and backup engineers, the PM, plus the Sales Person and Director who have responsibility for the site. If the call is received after hours, then a status log should also be entered into the Maint2000 project by the person receiving the call.
3. If a project is closed and no maintenance project exists, then the call will be tracked in the Maint2000job in GV. All management and sales personnel are on the team for this job, as are

engineers with primary support responsibility for any customer. The PM will consult with the Director to determine how to resolve commercial implications.

4. The PM has the option of creating a new job in GrandView any time that the issue appears to be significant enough that tracking of costs for the task is required. This will give the team a job to charge hours against and will allow RoviSys to monitor costs for similar issues. If the support is not warranty related, this data can also be used to generate a proposal.
5. Any ongoing support on a project that is not an open project should be logged as a status in Maint2000 to raise awareness that an issue has been reported. Details of the issue and solution will be stored in the individual jobs per above.
2. **Maintenance/Support Contracts** - Customers are typically offered a support contract at the conclusion of a project. These contracts have built-in escalation paths and response times that are detailed in each proposal/contract. General guidelines are presented in this RAP.
 1. The LE/PM will propose standard support terms to the customer, basing the scope on the size of the system and customer's ability to support it onsite. The PM will review the proposal with the customer and discuss alternatives which will result in a consensus RoviSys approach to the contract.
 2. When a customer purchases a support contract, the order is entered in GrandView.
 3. Support job numbers and Contact info are also tracked in the Maint2000 job in GrandView. This job is a central store of info on maintenance contracts and activity from after hours calls handled by the management team.
3. **Routing of initial call** - Calls may be directed to our main number and answered by the office staff, or could be direct dialed to the PM or LE on a specific project. This RAP will handle both cases.
 1. The main switchboard automated attendant menu will instruct the caller how to reach support.
 2. The Receptionist will ask the customer for their main contact and if it is unknown, the receptionist will use GV to locate the PM for that customer/site. If the PM is not available, the call will be escalated to Director who will assign the case.
 3. Direct Dial to PM or LE puts the customer in contact with the RoviSys team, with the option to revert to voice mail or to the receptionist.
4. **After Hours Calls** for customers who purchase 24 hr support
 1. The PM will contact the customer upon receipt of Purchase Order and establish a point of contact and send a letter with the phone number for after hours support.
 2. Calls will be answered by a service that will collect the name, phone number and nature of problem.
 3. The Manager on duty will be notified by the service and will call the plant, generally within 20 minutes.
 4. The Manager on duty will speak with the site to determine if the need is an emergency and who should be contacted. If the customer has an ongoing support issue with a specific engineer, that info will be used to directly assign the call.
 5. The Manager will then assign the issue to the appropriate engineer or PM. The GrandView information for that site or project will include a list of the RoviSys Team.

6. The engineers involved may apply for Emergency Support Pay via this [procedure](#).

5. Follow up and Escalation of Support Calls

1. The PM will follow up with the customer the day after a support call is received.
2. The PM or LE will post the status and plan forward in GrandView.
3. If no satisfactory resolution is posted, the Director and/or Sales Person will initiate follow-up and escalate.
4. The customer can escalate the issue at any point by using the contact info listed in GV for the project team, or by calling any manager or director.
5. The extended resolution plan will be managed with GV; to assign tasks, dates and follow up.
6. After the support issue is resolved, the LE, PM or Director will initiate with the site to ensure that the call can be closed.
7. All status logs are retained in GV for long term analysis.

6. Training

1. The project support proposal dictates the methodology for the application of customer support and includes: the support phone number(s) to be utilized by the customer, RoviSys support availability (ie: 24/7, 9-5) and RoviSys response times (ie: 1 hour after call received).

The RoviSys project manager shall review the support terms with the site's responsible manager and key plant personnel during the client kick-off meeting. Onboarding of additional client contacts who intend to utilize the support contract will be managed by the site's responsible manager.

2. The project's existing support engineers are responsible for the training and onboarding of new support personnel. Training should include: introduction of key plant personnel, review of the customer lifecycle, identification of the software utilized at the site, overview of the production process and requirements for remote access and security. If required, the existing support engineers shall reach out to the appropriate site personnel to request additional access credentials for new support team members.

The active primary and secondary support contacts for the project will be maintained within the MAINT2000 job on Grandview. These engineers will serve as the key contacts when a support request is initiated. Allocation of the primary and secondary engineering support contacts will be handled by the RoviSys project manager.
